

Finding Doubles to 20

Materials:

- *Primary Number cards (cut out and store in a Ziploc baggie)
- *Finding Doubles to 20 game board

Directions:

1. Player 1 turns over a number card and doubles it. (If you get a 2, then you think $2+2=4$.)
2. Player 1 finds the sum on the game board and writes the number sentence above the sum ($2+2$ or $2+2=4$).
3. Players take turns until all possible boxes have been filled. Notice which boxes aren't used. Why are these boxes empty?
4. If you choose a wildcard, you can pick the number you wish to double.
5. If you pick a zero, you may choose another card.
