

Neighbors Count II

- Game sheet
- colored markers
(or chips)
- 3 dice (1-6)

Skills targeted:

- mixed
operations
- flexible
thinking/
number sense

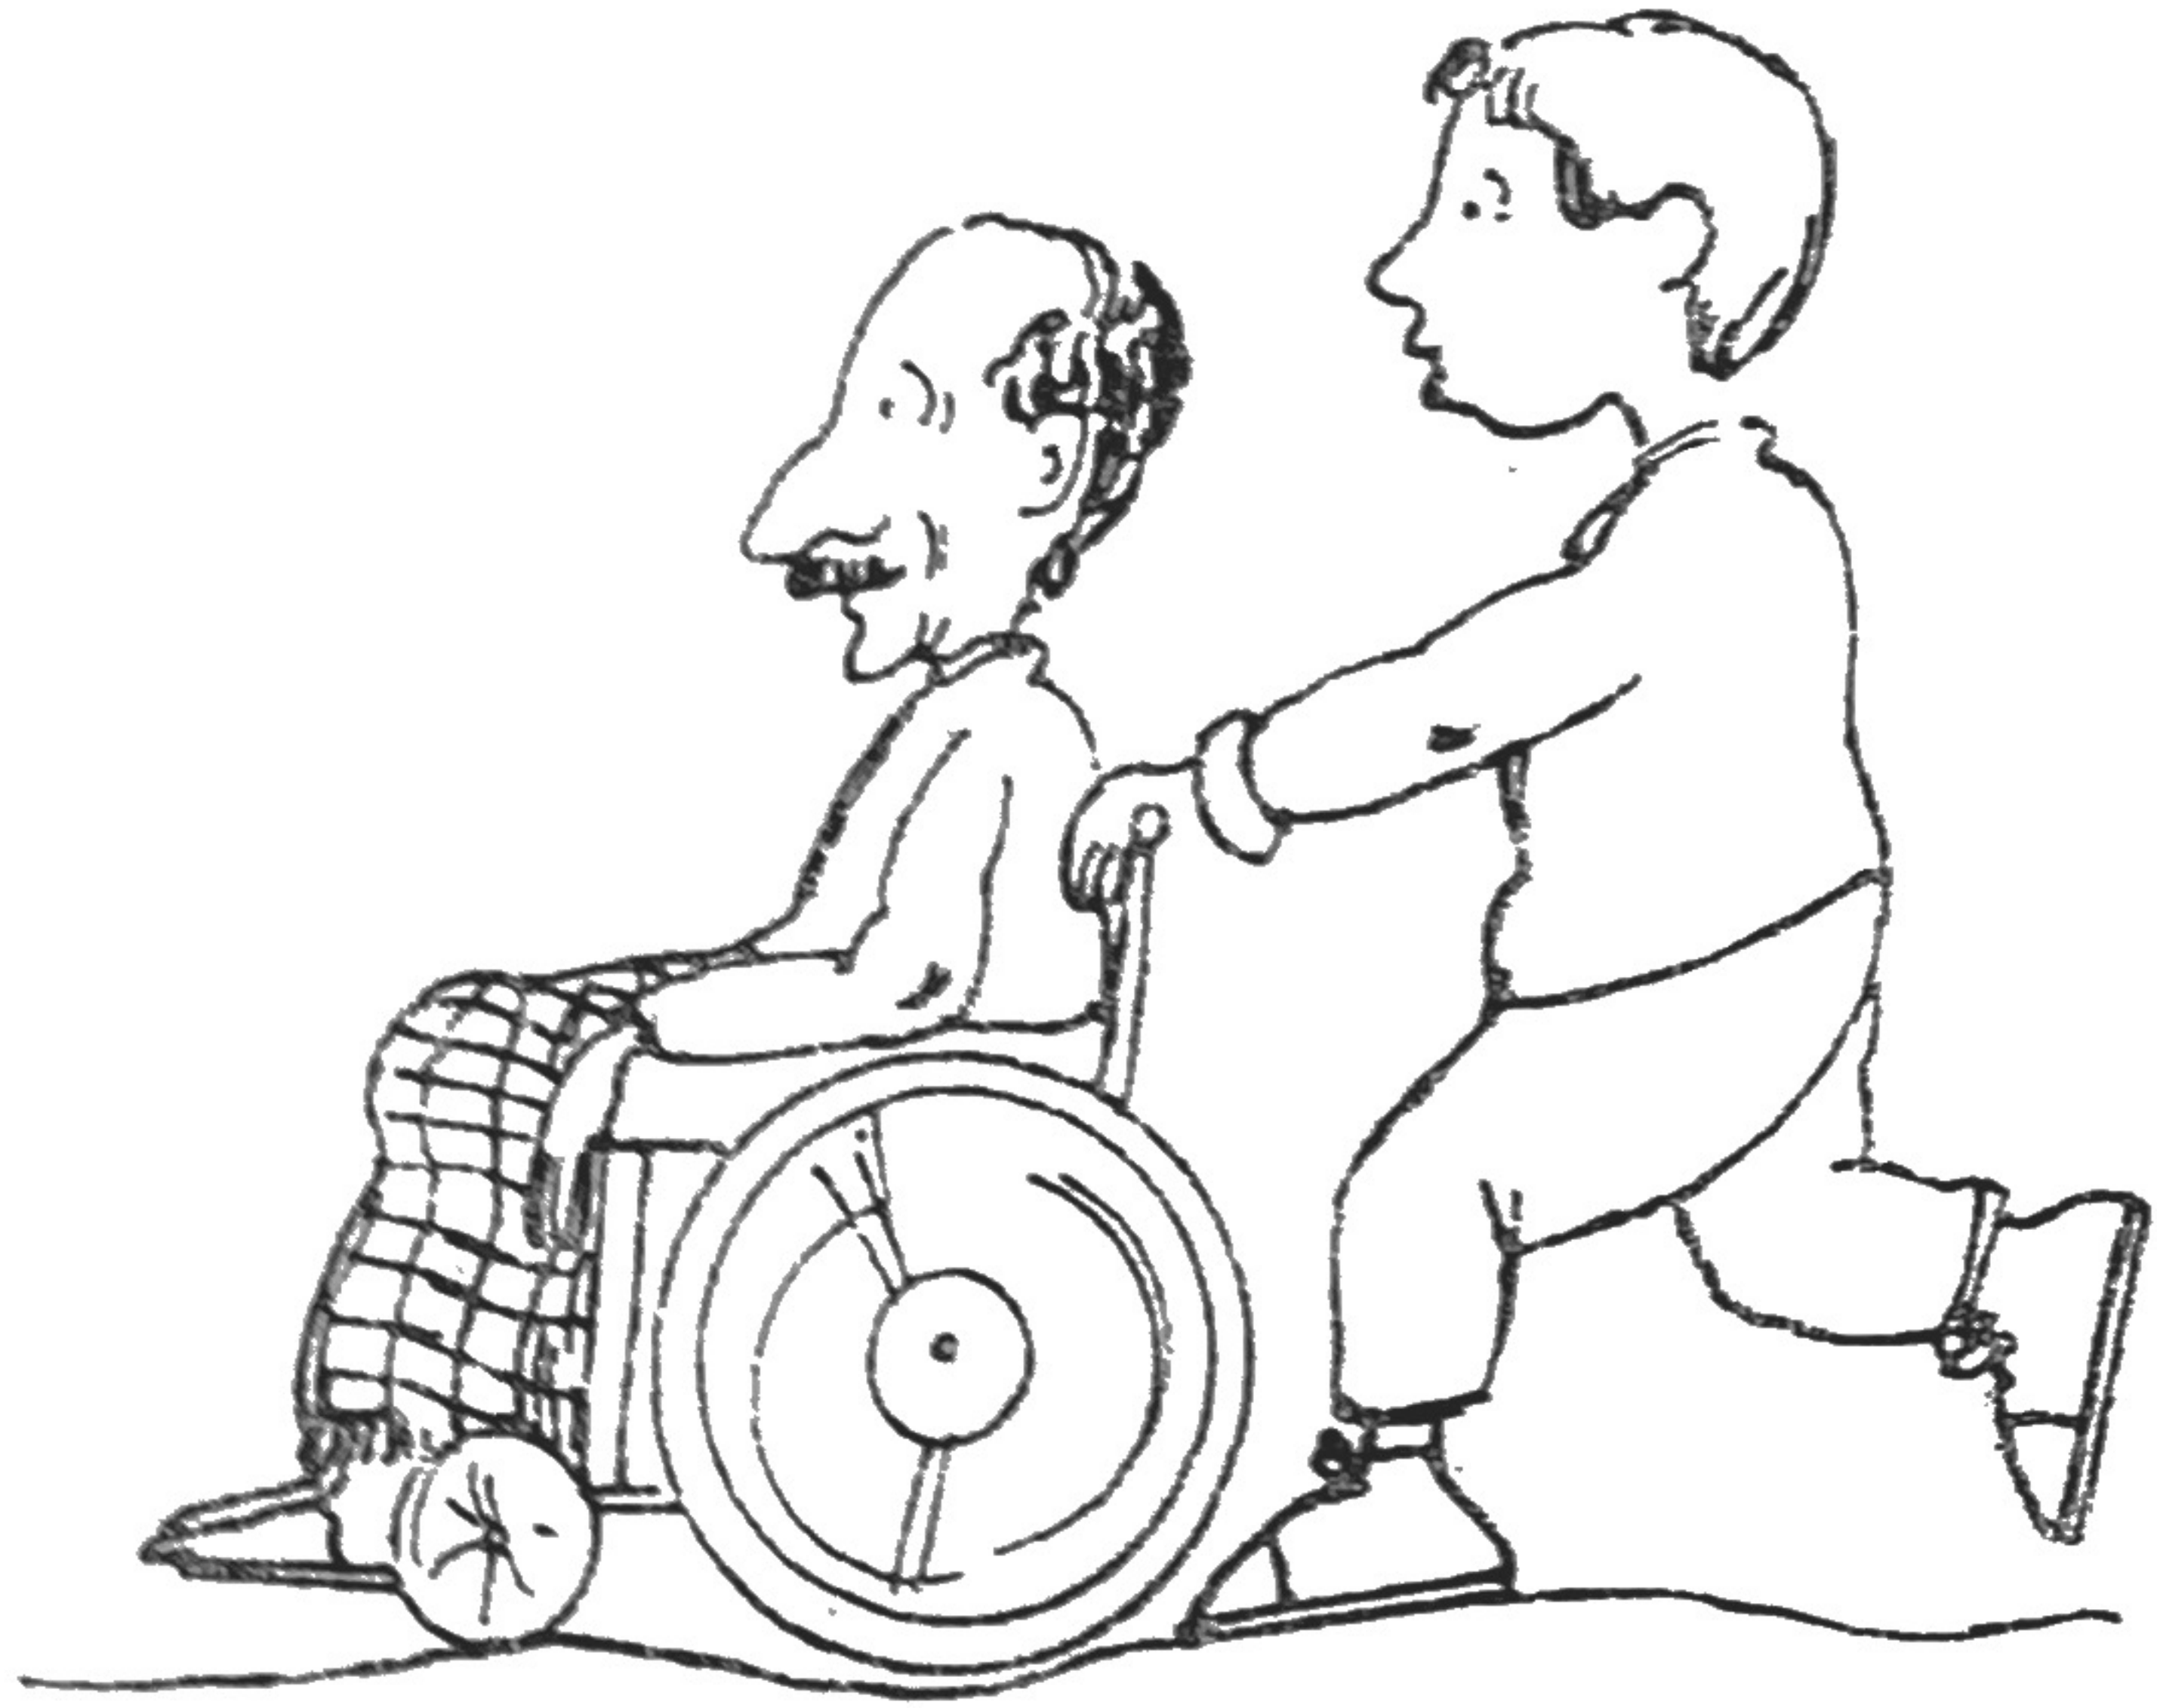

★ Objective: Get the highest point total (1 point per adjacent # covered; diagonals NOT included!)

1. Team A: Roll the dice, then add, subtract, multiply, and/or divide the numbers shown. State the equation and cover the resulting answer on the gameboard.
2. Team B: do the same. A point is scored if you cover a # that shares a side with a # that's been covered.
3. Continue. 1 point for each adjacent covered #!
The game ends when all #'s are covered or after a team "passes" 3 times.

Questions:

- What kinds of rolls do you prefer? Explain.
- What strategies worked to give you high totals on your turns?
